--	---

Reference list of all your citations appears at the end of your article with entries listed numerically and in the same order in which they have been cited in the text.

For an original scientific article we recommend using at least 25–30 sources, and for a scientific review at least 50–80. The list of References includes only peer-reviewed sources (articles from scientific journals and monographs), which are mentioned in the text of the article. References should contain: at least 30% of foreign sources; at least 50% of the works published in the last 3 years.

Self-citation is not allowed in the list of References! Also, within the list of references are **not included**: dissertational researches; different tutorials, textbooks, educational and methodical manuals; standards, statistical collections and reports; electronic resources (journals, articles, newspaper and any news, blogs, reports and various researches) and general links to websites; regulatory and legal documentation (laws, regulations, acts, etc.); non-scientific publications (newspaper articles, articles of socio-political journals, etc.). The above sources should be given **in the footnotes**, along with other comments and notes of the authors.
